

This set includes two transition straights to allow
a gradual change in driving conditions

NEW OFF ROAD EXPANSION PACK FROM SCX®

For people who want to combine the speed of tarmac with the excitement of Off Road
driving

SCX® presents its new **Off Road Expansion Pack**, a new product which offers enthusiasts a wealth of possibilities, allowing them to add Off Road sections and bends to their circuits, or even create an Off Road circuit using tarmac track sections they already have.

This set features two transition straights. These are track sections with an Off Road finish on half their length and a tarmac finish on the other half. This allows a gradual change from one surface to the other, so that drivers can adjust their driving style to suit the ground they are on at the time.
